

# NEW SOLAR POWERED ILLUMINATED OUTDOOR NOTICEBOARDS AND SIGN SYSTEMS

## SOLAR VISION FEATURES

- No trenching or cabling
- Powered by daylight, not just sunlight
- No running costs and no mains connection costs
- Vandal resistant
- Maintenance Free
- Wall or post mounted
- Enhances standard Noticeboards
- Adjustable timer to promote your message 24 hours per day

## Our solar range uses photovoltaic panels powered by daylight

The main purpose of the product is to give stand alone free low voltage illumination when required.

Motion activated, the SOLAR VISION units will illuminate the sign and the immediate area beneath it—without lighting up the sky! The lighting is motion activated via a passive motion sensor that detects movement after dusk. The sensor drastically reduces the power consumption of the unit.

There are Health and Safety benefits to SOLAR VISION too because it has an independent power supply. If there is a power cut SOLAR VISION will still work providing illumination of signs that could be important to public or staff safety.

SOLAR VISION stand alone units are quick and easy to install and can be wall or post mounted without the need for trenching or cabling, giving reduced environmental impact and disturbance. SOLAR VISION allows more flexibility over positioning on site which is particularly beneficial to signage where trenching would prove difficult or restrictive. SOLAR VISION is completely maintenance free and uses attractive and effective LED illumination.

SOLAR VISION is available in a range of sizes; it has a painted steel back for mounting with magnets, or can also be supplied with internal pin board. It can be finished in any standard BS or RAL colour.

SOLAR VISION technology is also available for signs, full details and pricing available on request. Signs can be manufactured to your exact requirements, freestanding or wall mounted.
